

Odjavi svakoga s Linux računala

written by js | 2023-03-03

Prvo se SSH-iraj i pokreni "w" da vidiš tko je online:

- w

Pokazat će nešto kao

```
15:10:22 up 9 min, 2 users, load average: 0,71, 0,57, 0,30
USER      TTY      FROM          LOGIN@  IDLE   JCPU   PCPU   WHAT
mirko     tty1     :0            15:01   9:15   0.98s  0.29s  lxqt-
session
slavko    pts/0    10.11.12.13   15:09   1.00s  0.10s  0.02s  tilde
glavni    pts/0    10.12.13.14   15:19   2.00s  0.10s  0.02s  w
```

Onda ih sve *pokilaš*; sebe ("glavni") ne moraš:

- pkill -KILL -u mirko
- pkill -KILL -u slavko

logout everyone xlogout xeveryone all xall logoff xlogoff force xforce any xany sve
xsve svi xsvi sva xsva who xwho
