

Linux docker OpenBB error — PermissionError: [Errno 13] Permission denied: '/home/python/OpenBBUserData/st yles'

written by js | 2023-06-20

Uvod

Instaliraš docker verziju OpenBB terminala prema uputama

<https://my.openbb.co/app/terminal/installation>

Problem

Pojavi se pogreška

```
▪ PermissionError: [Errno 13] Permission denied:  
  '/home/python/OpenBBUserData/styles'
```

KPM?!

Rješenje

Editiraj YAML:

```
▪ nano docker-compose.yaml
```

Promijeni sljedeća dva retka (dio iza dvopičja) primijenivši stvarnu situaciju:

```
- ~/OpenBBUserData:/root/OpenBB/OpenBBUserData  
- ~/.openbb_terminal:/root/OpenBB/.openbb_terminal
```

Primjer vrijedi za situaciju kada:

- instaliraš kao root
- nalaziš se u za tu priliku netom kreiranom folderu /OpenBB (da, root diska, pravi Linuxaši umiru kao pravi muškarci!)

Ako budeš lošije sreće, možda ćeš se trebati poigrati i s `chown -R`

Pokretnanje

- `sudo docker compose -f docker-compose.yaml -f docker-compose.x11.yaml run openbb`
- # ako ima problema s Chartovima:
- `sudo docker compose -f docker-compose.yaml -f docker-compose.x11.yaml run -e WEBKIT_DISABLE_COMPOSITING_MODE=1 openbb`
