

kpcli - KeePass CLI (neslužbeni modul)

written by js | 2021-08-29

Tema

Korištenje KeePass baze u Linux CLI okruženju (vjerojatno i WSL, no nisam još isprobao) pomoću programa "kpcli".

Postupak - tl;dr

Instaliranje

- wget

`https://deac-ams.dl.sourceforge.net/project/kpcli/kpcli-3.6.pl`

- `sudo apt install libcrypt-rijndael-perl`
- `sudo apt install libsort-naturally-perl`
- `sudo apt install libterm-readkey-perl`
- `sudo apt install libterm-shellui-perl`
- `sudo apt install libfile-keepass-perl`

Korištenje

Prikaži podatke sloga s naslovom "Mirko", direktno iz CLI:

- `kpcli.pl --kdb=nestonesto.kdbx --command=show /Proba123/Mirko`

```
kpcli: /> show /Proba123/Mirko -f
Path: /Proba123/
Title: Mirko
Uname: juzer
Pass: lozinka
URL: localhost
Notes:
```

Kreiraj novi slog u bazi, u mapi "Proba123", s naslovom "Slavko":

- new /Proba123/Slavko

```
kpcli:/> new /Proba123/Slavko
Adding new entry to "/Proba123"
Title: Slavko
Username: korisnik
Password:          ("g" or "w" to auto-generate, "i" for interactive)
Retype to verify:
Entries mismatched. Please try again.
Password:          ("g" or "w" to auto-generate, "i" for interactive)
kpcli:/> new /Proba123/Slavko
Adding new entry to "/Proba123"
Title: Slavko
Username: korisnik
Password:          ("g" or "w" to auto-generate, "i" for interactive)
Retype to verify:
URL: http://localhost
Tags:
Strings: (a)dd/(e)dit/(d)elete/(c)ancel/(F)inish?
Notes/Comments (""):
(end multi-line input with a single "." on a line)
|
Database was modified. Do you want to save it now? [y/N]:
```

Razno

<http://kpcli.sourceforge.net>

Pozor: ovaj modul **nije** kreirao autor programa KeePassX. Upitno je koliko se i njemu može vjerovati ☹ ali svakako predlažem da kpcli koristiš samo za spremanje podataka o nekoliko računala/lozinki koje koristite na Linuxu, ali ne i za dijeljenje svoje glavne baze svih važnih lozinaka.
