

fetchmail, fetchmailrc primjer

written by js | 2021-08-31

Tema

Korištenje fetchmaila za preuzimanje mailova

Postupak - tl;dr

- `sudo apt install fetchmail`
- `nano .fetchmailrc`

```
poll pop3.domena.tld
```

```
▲
  protocol POP3
  port 995
  user ime.prezime@domena.tld password admin123 is
  lokalnikorisnik here
  nofetchall
  ssl
  fetchlimit 1
  nokeep
```

- `chmod 700 .fetchmailrc`
- `fetchmail --fetchmailrc .fetchmailrc`

Ova konfiguracija preuzima samo jednu poruku s POP3 servera, putem SSL protokola, a nakon toga se poruka briše sa servera.

Naravno, trebat će ti i nešto poput “mailutils” i sl, ali o tom po tom.

Redirect na drugu e-mail adresu

```
no rewrite
mda "/usr/local/bin/procmail -f %F -d %T";
```

Datoteka “.procmailrc“:

```
VERBOSE=yes
```

:0

! ime.prezime@domena2.tld

mail xmailx xemailx email fetchmail xfetchmailx xconfigurationx xconfx
