

Samba - dijeljene mape; server: Linux, klijent: Windows {Ubuntu}

written by js | 2021-10-28

Tema

Kako folder na Linuxu podijeliti s Windows klijentom

Postupak - tl;dr

- `apt install samba`
- `smbpasswd -a <%PostojećiJuzer%>`
- zapiši lozinku □
- `nano /etc/samba/smb.conf`
- na kraj datoteke dodaj:

```
[Juzer]
path = /home/<%PostojećiJuzer%>
available = yes
valid users = <%PostojećiJuzer%>
read only = no
browsable = yes
public = yes
writable = yes
```

- spremi, zatvori
- `service smb restart`
- isprobaj s drugog računala:
 - `\\<%IPadresa%>\Juzer`

Po potrebi - UFW

```
ufw allow from 192.168.1.0/24 to any port 137
```

```
ufw allow from 192.168.1.0/24 to any port 138
```

```
ufw allow from 192.168.1.0/24 to any port 139
```

```
ufw allow from 192.168.1.0/24 to any port 445
```
