

# Pristup s Linuxa folderu na Windowsima

written by js | 2021-11-21

## Tema

Folder na Windows računalu želiš podijeliti s korisnikom koji će mu pristupati s Linux računala.

## Na Windows računalu

```
mkdir c:\folderzalinuxmasinu
net user linuxkorisnik admin123 /ADD
net share folderzalinuxmasinu=c:\folderzalinuxmasinu
/grant:linuxkorisnik,FULL /remark:"Folder za Linux racunalo"
/cache:none /users:2
```

## Na Linux računalu

```
mkdir /home/linuxkorisnik/foldernalinuxu
sudo apt install cifs-utils
sudo mount -t cifs -o
username=linuxkorisnik,password=admin123,uid=linuxkorisnik,ioc
harset=utf8 //WindowsPC/folderzalinuxmasinu
/home/linuxkorisnik/foldernalinuxu
echo Proba123šđčćžŠĐČĆŽ >
/home/linuxkorisnik/foldernalinuxu/Proba123-šđčćž-ŠĐČĆŽ.txt
# sudo umount //WindowsPC/folderzalinuxmasinu
```

## /etc/fstab

```
//WindowsPC/folderzalinuxmasinu /home/korisnik/foldernalinuxu
cifs
nofail,_netdev,username=linuxkorisnik,password=123123123123,ui
d=linuxkorisnik 0 0
```

Važno! Mountanje iz FSTaba/boota **nisam** detaljno testirao! Iako su "nofail" i "\_netdev" uključeni - dobro testiraj da ti ne bi mašina ostala u zraku jer ne može do shared foldera ili nešto!
